

SimCapture Node

SimCapture Node is a remarkably compact and comprehensive in-room SimCapture® and LiveCapture® solution for institutions interested in a low-impact installation that is rapid and affordable. With this new in-room solution, users can enjoy B-Line Medical's best in class support and a single point of contact for software, SimCapture and LiveCapture hardware, and now audiovisual equipment.

SimCapture Node is fully scalable and can be installed with both standard and advanced IP-based audiovisual packages. Both packages offer pan, tilt and zoom capability and excellent sound quality. Despite its diminutive size, SimCapture Node's software options are identical to B-Line Medical's rack-mounted SimCapture and LiveCapture form factors.

Key features and benefits

- Small form factor fits almost anywhere
- Turnkey solution supported by B-Line Medical
- Fully scalable and supports all software tiers
- IP-based and supports cloud-based playback
- Multiple audiovisual configurations supported
- Rapid and affordable installations
